

# Modular Tiles

## Cleaning & Maintenance Instructions

The following cleaning & maintenance instructions are recommended to ensure the product maintains its desired appearance and effective performance, as well as ensuring a long life span for the product.

### Daily Cleaning

- Vacuum daily with a heavy-duty commercial type vacuum cleaner that features a rotary power brush or beater bar to remove deeply embedded dirt particles, especially in heavy traffic areas. Matting products release more soil when dry.

### Spot Removal

- If a spill occurs, use a clean absorbent cloth or paper towel to absorb as much of the liquid as possible. Spray the stained area with an all-purpose spot remover and rub the surface with a clean white cloth. Turn the cloth often to a clean side. Grease or oil based stains may require a citrus-solvent based spot remover. All-purpose and citrus-solvent spot removers are available from your local janitorial supply distributor\*.

*\*Note – Always test spot removers in an inconspicuous area of the mat.*

### Gum Removal

- Excess chewing gum should be scraped off with a standard putty knife. Chewing gum residue may require use of a citrus-solvent based spot remover available locally at your janitorial supply distributor.

### Periodic Maintenance

- Modular Tiles should be periodically deep cleaned by the Hot Water Extraction method. Best results and quickest dry times will be achieved with a commercial truck-mounted steam extraction machine. Extraction cleaning removes deeply embedded soils and should be performed as needed, based on your traffic count and soil level. A minimum quarterly extraction cleaning is recommended for high traffic applications, more often during winter months in traffic lanes.
